STEP
1

Make sure the unit is not connected to AC power throughout this process. Remove the mylar sheet underneath the unit to expose the battery connector.

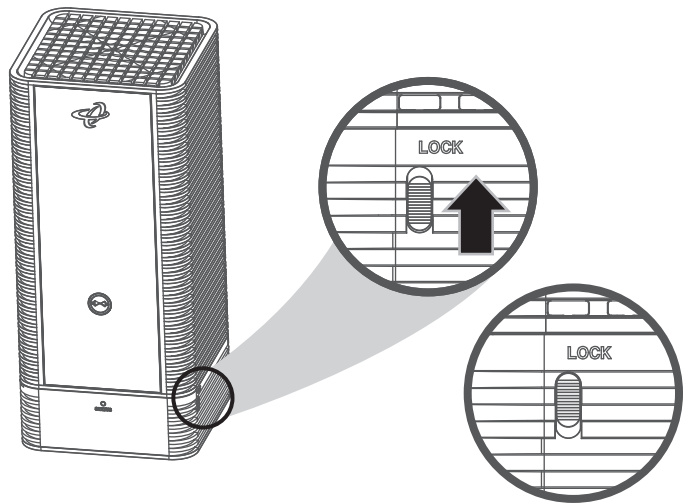

STEP
2

Slide the battery back-up module into the gateway so the connectors line up.

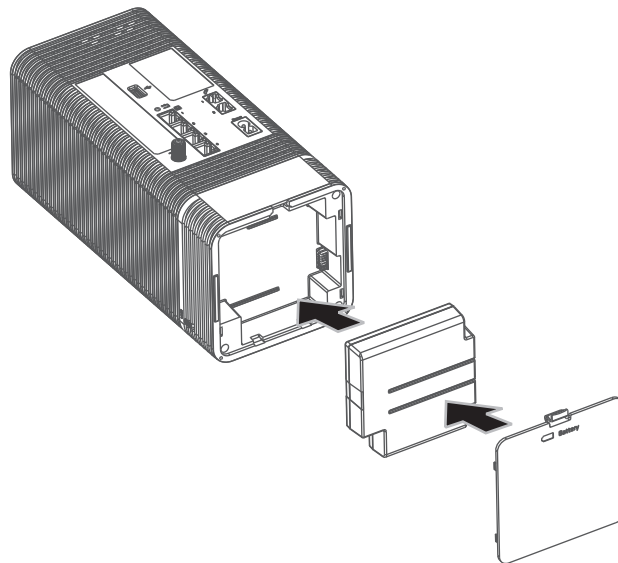

STEP
3

Lock the battery back-up module in place by pushing the switch upwards.

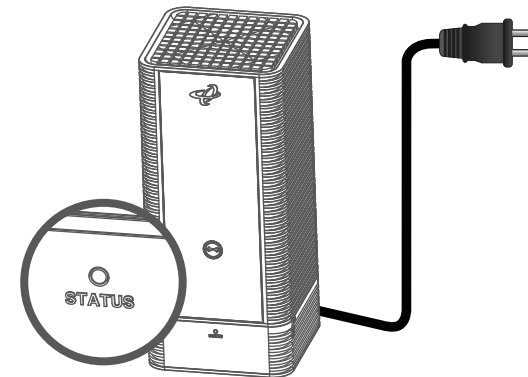

STEP
4

Install the battery by opening up the door under the module, aligning it in the proper direction and then closing the door once more.

STEP
5

Connect the gateway to a power outlet.
The battery back-up module's LED will act as follows:

- Off:** Gateway is running on AC power
- Orange - Steady:** Gateway is operating on battery back-up power
- Orange - Blinking:** Gateway is running on AC power and is charging the battery
- Red- Steady:** Battery power is low
